

Starting from A, push B and C
in queue.

when at B, push D & E in
queue.
So,

when at C push

F into the queue

So, the order of traversal
becomes A, B, C, D, E, F
and the tree is

Final Tree

Step by step diagram.

Step 0: Initial state before BFS traversal

Step 1: Visiting B (front of the queue)

Step 2: Visiting C (front of the queue)

Step 3: Visiting D (front of the queue)

Step 4: Visiting E (front of the queue)

Step 5: Visiting F (front of the queue)

Step 6: Completed BFS traversal

The final tree is:
